

Elan Easi-Mute Kit (EZK-xxx)

The Easi-Mute Kit is a cost effective mute solution that utilises the same vehicle and accessory harnesses as the Intelli-Mute range but without the Audio Sensing & Intelligent Activity & Voltage software features.

Key Features:

- Four relay mute module enabling switching of six vehicle speakers simultaneously, whilst phone audio is played through vehicle front speakers.
- Internally fused with re-settable automotive thermal fuses.
- Short circuit protection, to protect the module from incorrect power configuration.
- Time out delay when call is ended to ensure audio quality is not compromised when switching between radio and phone call.
- Isolated mute Input / Output to protect car-kit from current overloading.
- Detachable 'T' shaped harness for easier cable routing and installation where space is restricted.
- Easily interchangeable car-kit harnesses for future phone upgrading.
- Plug & play concept which carries on the Elan philosophy*

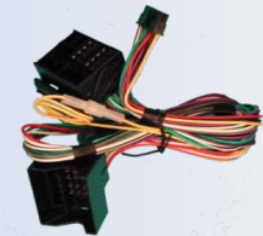

Important note: You will require a car-kit specific accessory harness (EAH-xxx) in order to complete the installation of the (EZK-xxx) Kit.

**Some products do have external cables that may require some connectivity to vehicle and these cannot be made plug & play.*

Kit Contents:

Elan Easi-Mute Module (EMB-001)

Elan Vehicle Specific Harness (EVH-xxx)
