

Elan Intelli-Mute Kit (EIK-xxx)

The Intelli-Mute Kit is the world's first software driven micro processor controlled mute module with intelligent Activity & Voltage detection software. Providing its own engine running ignition output for easy installation and use on vehicles with Can-Bus & Multiplex wiring systems.

Key Features:

- Four relay mute module enabling switching of six vehicle speakers simultaneously, whilst phone audio is played through vehicle front speakers.
- Internally fused with re-settable automotive thermal fuse.
- Short circuit protection, to protect the module from incorrect power configuration.
- Time out delay when call is ended to ensure audio quality is not compromised when switching between radio and phone call.
- Isolated mute Input / Output to protect car-kit from current overloading.
- Detachable 'T' shaped harness for easier cable routing and installation where space is restricted.
- Audio & Mute activated device, can be activated by Audio, Mute or both simultaneously.
- Audio sense provides Keypad tones and SMS alert through the vehicle front speakers.
- Provides simulated 12 volt ignition supply once the engine is started even when used on Can-Bus vehicles where no ignition control connection is available.
- Micro-processor controlled module with intelligent activity and voltage detection software.
- Visual status LED to aid installer during installation and testing.
- Easily interchangeable car-kit harnesses for future phone upgrading.
- Plug & play concept which carries on the Elan philosophy*

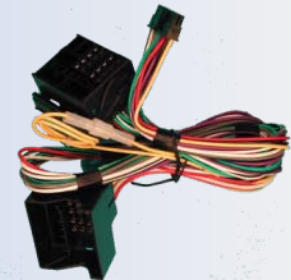

Important note: You will require a car-kit specific accessory harness (EAH-xxx) in order to complete the installation of the (EIK-xxx) Kit.

**Some products do have external cables that may require some connectivity to vehicle and these cannot be made plug & play.*

Kit Contents:

Elan Intelli-Mute Module
(EMB-000)

Elan Vehicle Specific
Harness (EVH-xxx)
